ABSTRACT:

Disclosed is a method and corresponding kit for assaying the presence, activity, or both, of an enzyme classified within an enzyme classification selected from the group consisting of EC 2.7.1, EC 3.1.3, and EC 3.1.4. The method generally includes the steps of reacting an enzyme with a substrate for a time sufficient to yield phosphorylated or dephosphorylated product; contacting the product with a binding matrix, whereby product is adhered to the matrix; and then analyzing the matrix for presence of, amount of, or both the presence and the amount of the product fixed to the matrix, whereby the presence, the activity, or both the presence and activity of the enzyme can be determined.

ABSTRACT:

The present invention relates to a novel defined medium suitable to cultivate lactic acid bacteria, such as Lactobacillus or Bifidobacteria. In particular the present invention pertains to the use of said medium for the isolation of bioactive molecules or functional metabolites.

BSPR:

In the past few decades several studies were performed by means of defined media, on the strain Lactobacillus johnsonii ATCC 11506 (formerly known as Lactobacillus acidophilus R-26), firstly proposed by Hoff-Jorgensen as an experimental organism for determining the presence of DNA residues in biological samples (Hoff-Jorgensen, "A microbiological assay for deoxyribonucleosides and deoxyribonucleic acid", Biochem J. 50 (1952), 400-403). Ives and Ikeda report in "Life on the salvage path: the deoxynucleoside kinases of Lactobacillus acidophilus R26", Progr. Nucl. Acid. Res. (1998), 207-252, that this strain requires the presence of at least one deoxyribonucleoside in the growth medium due to the functional absence of ribonucleotide reductase activity.
